

# Recurrent Neural Network

# Recurrent Neural Network

# Recurrent Neural Network

We can process a sequence of vectors  $\mathbf{x}$  by applying a **recurrence formula** at every time step:

$$\boxed{h_t} = \boxed{f_W}(\boxed{h_{t-1}}, \boxed{x_t})$$

new state / some function with parameters  $W$  / old state / input vector at some time step

# Recurrent Neural Network

We can process a sequence of vectors  $\mathbf{x}$  by applying a **recurrence formula** at every time step:

$$h_t = f_W(h_{t-1}, x_t)$$

Notice: the same function and the same set of parameters are used at every time step.

# (Vanilla) Recurrent Neural Network

The state consists of a single “hidden” vector  $h$ :

$$h_t = f_W(h_{t-1}, x_t)$$

$$h_t = \tanh(W_{hh}h_{t-1} + W_{xh}x_t)$$

$$y_t = W_{hy}h_t$$

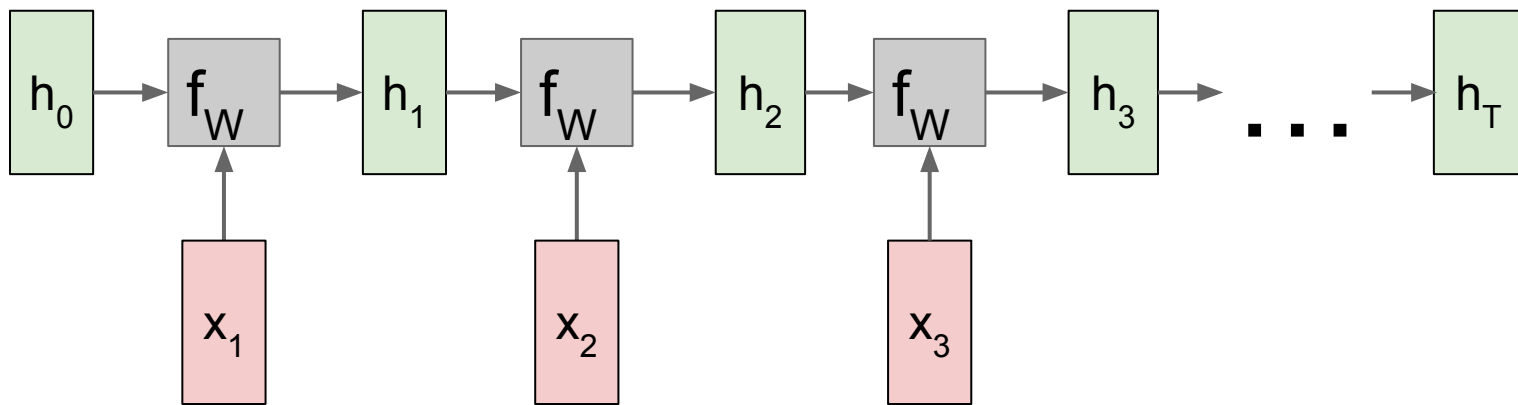

# RNN: Computational Graph

# RNN: Computational Graph

# RNN: Computational Graph

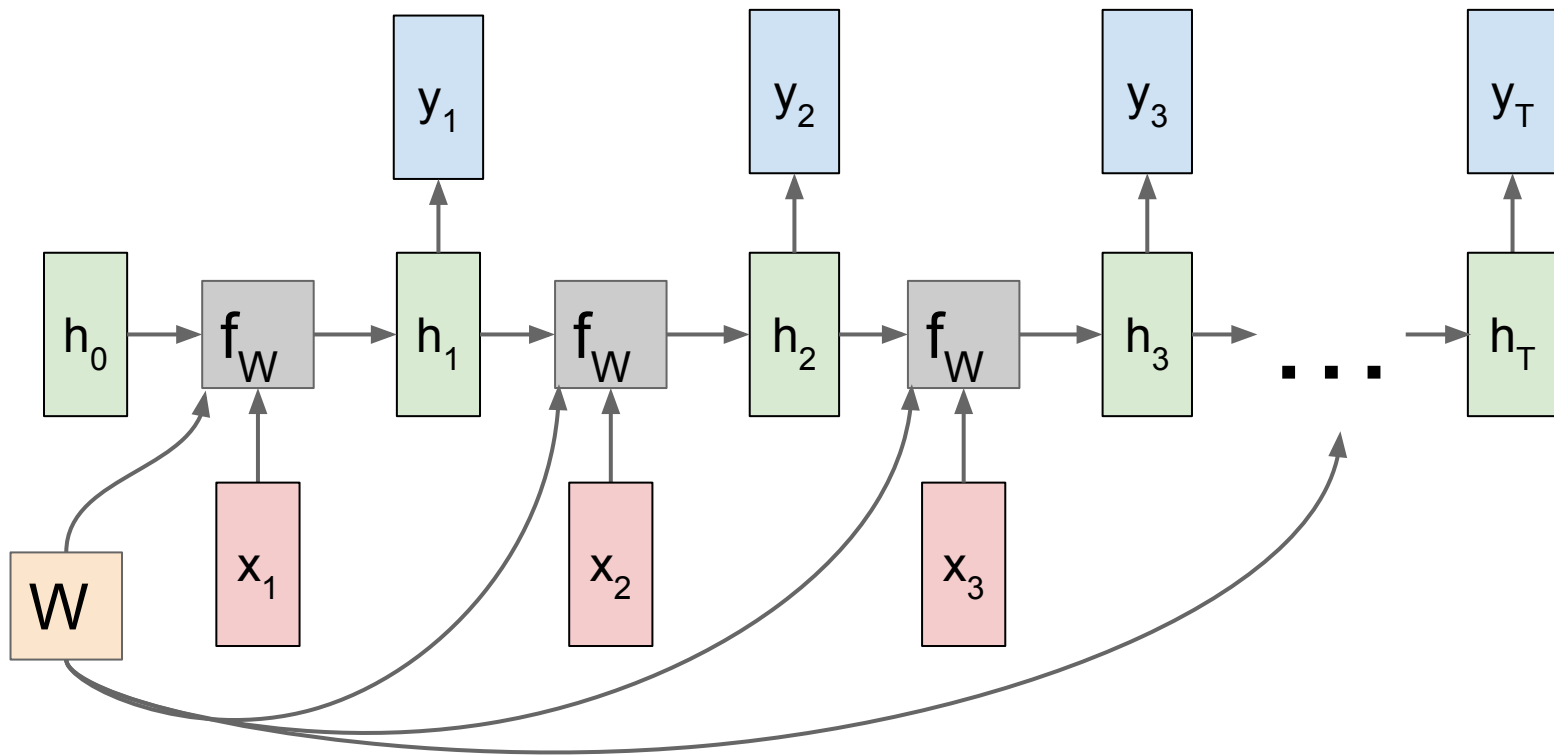

# RNN: Computational Graph

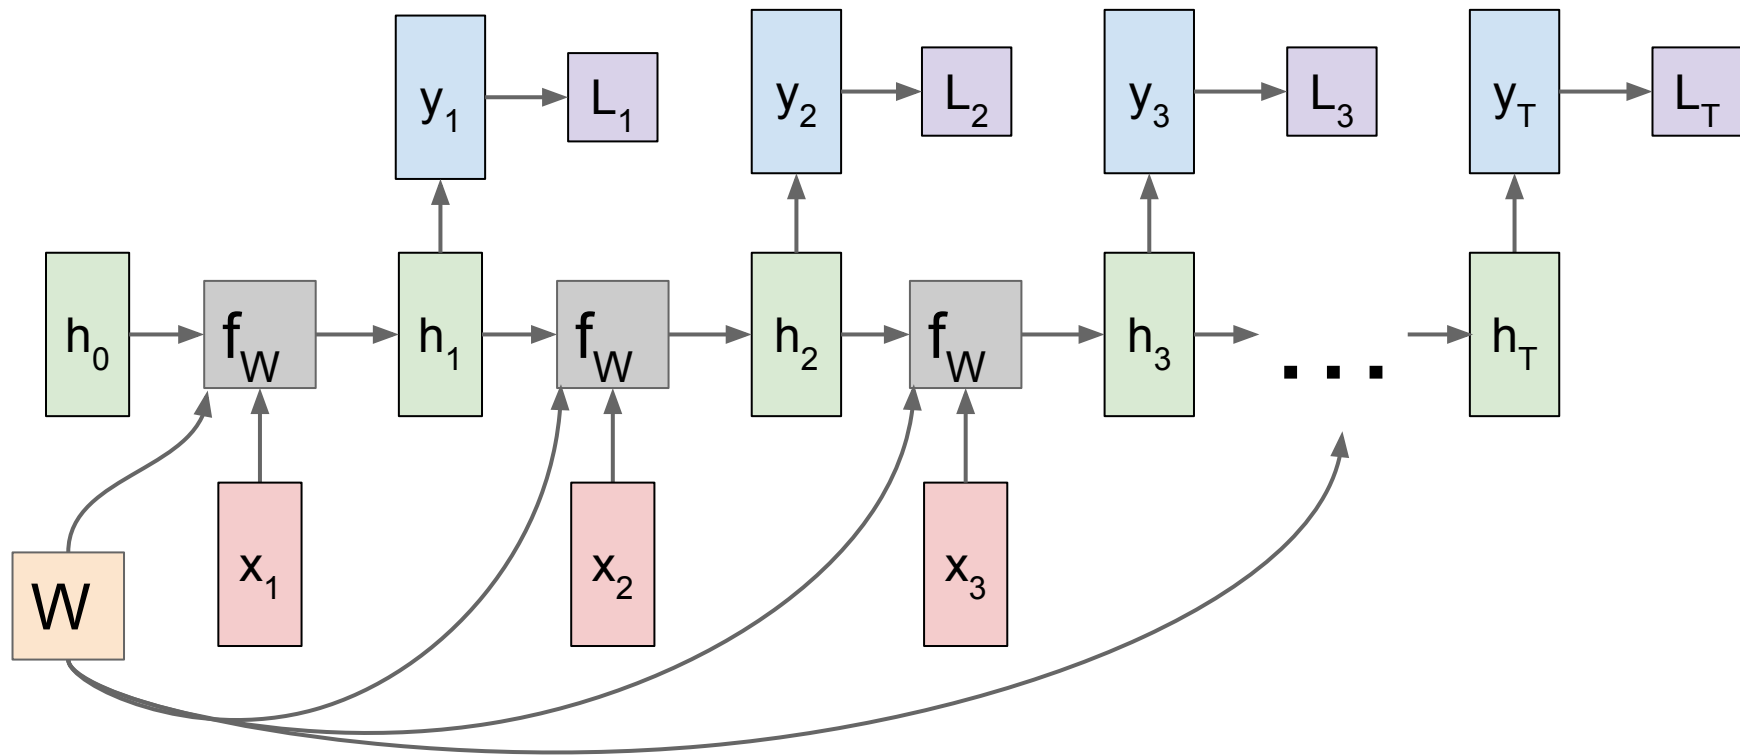

Re-use the same weight matrix at every time-step

# RNN: Computational Graph: Many to Many

# RNN: Computational Graph: Many to Many

# RNN: Computational Graph: Many to Many

# RNN: Computational Graph: Many to One

# RNN: Computational Graph: One to Many

# Sequence to Sequence: Many-to-one + one-to-many

**Many to one:** Encode input sequence in a single vector

# Sequence to Sequence: Many-to-one + one-to-many

**Many to one:** Encode input sequence in a single vector

**One to many:** Produce output sequence from single input vector

# Example: Character-level Language Model

At test-time sample  
characters one at a time,  
feed back to model

# Backpropagation through time

Forward through entire sequence to compute loss, then backward through entire sequence to compute gradient

# Truncated Backpropagation through time

Run forward and backward through chunks of the sequence instead of whole sequence

# Truncated Backpropagation through time

Carry hidden states forward in time forever, but only backpropagate for some smaller number of steps

# Truncated Backpropagation through time

# THE SONNETS

by William Shakespeare

From fairest creatures we desire increase,  
That thereby beauty's rose might never die,  
But as the ripper should by time decease,  
His tender heir might bear his memory:  
But thou, contracted to thine own bright eyes,  
Feed'st thy light's flame with self-substantial fuel,  
Making a famine where abundance lies,  
Thyself thy foe, to thy sweet self too cruel:  
Thou that art now the world's fresh ornament,  
And only herald to the gaudy spring,  
Within thine own bud buriest thy content,  
And tender churl mak'st waste in niggarding:  
    Pity the world, or else this glutton be,  
    To eat the world's due, by the grave and thee.

When forty winters shall besiege thy brow,  
And dig deep trenches in thy beauty's field,  
Thy youth's proud livery so gazed on now,  
Will be a tatter'd weed of small worth held:  
Then being asked, where all thy beauty lies,  
Where all the treasure of thy lusty days;  
To say, within thine own deep sunken eyes,  
Were an all-eating shame, and thriftless praise.  
How much more praise deserv'd thy beauty's use,  
If thou couldst answer 'This fair child of mine  
Shall sum my count, and make my old excuse,'  
Proving his beauty by succession thine!  
    This were to be new made when thou art old,  
    And see thy blood warm when thou feel'st it cold.
